

## Installation Tutorial

Script: The Real Estate Script

---

Thank you for your purchase of The Real Estate Script. This tutorial will guide you through the installation process. In this install example we use CPanel hosting control panel system to create a new MySQL database. *Your hosting control panel interface may be different but the tutorial may still be helpful.*

1. Please login to download script. On PHP Classifieds Script web site.

Use the username and password sent to you at time of purchase.

**Please Login to Download**

Email

Password

2. Once logged in to download. Please right click download link and click save target as to local computer.
3. Unzip files to local computer.
4. Using FTP software (i.e. Leech FTP), connect to web server and upload all unzipped script files. This may take 5 min(s) to an Hour depending on your connection type and upload speed. *Please be sure to monitor upload process, if an upload of a file failed retry in till complete. Incomplete uploads can lead to the script missing code and feature.*
5. When the FTP upload do not close FTP software yet it is needed further down.
6. We are now ready to begin the installation wizards for The Real Estate Script. Please open a web browser and go to:  
[www.yourdomain.com/installfiles/install1.php](http://www.yourdomain.com/installfiles/install1.php)
7. Please read the software license agreement and click next to continue.

## The Real Estate Script-- Installation

Thank you for your purchase of our script.

### Step 1

#### SOFTWARE LICENSE AGREEMENT

IMPORTANT - READ CAREFULLY: This License Agreement is a legal agreement between You and Vendor. Read it carefully before completing the installation process and using the Software. It provides a license to use the Software and contains warranty information and liability disclaimers. BY INSTALLING, COPYING OR OTHERWISE USING THE SOFTWARE, YOU ARE CONFIRMING YOUR ACCEPTANCE OF THE

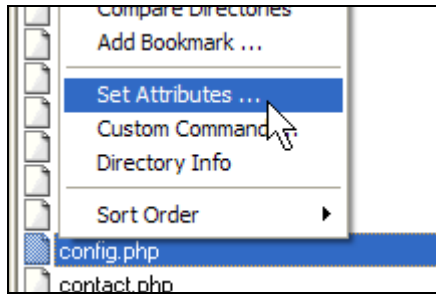

8. The installation wizard will now check the file permissions for the script. *File permission are very important for PHP scripts. With out the right file permissions the script can save/resize/delete images or backup the database. So we must adjust the file/folder permissions a little to have these features.*

## The Real Estate Script -- Installation

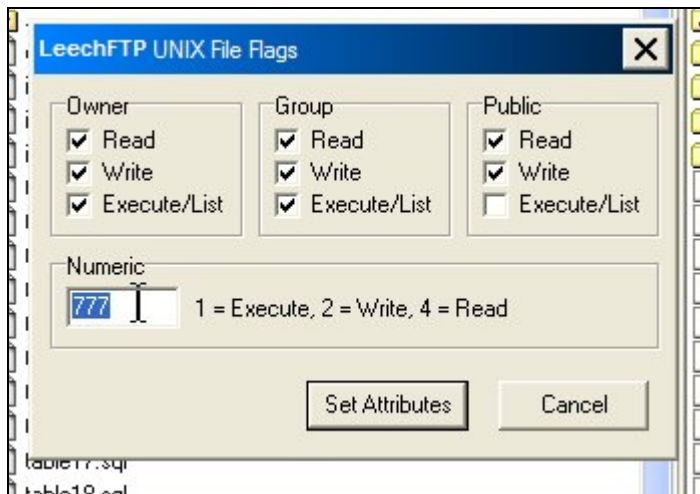

### Checking Folder/File Permissions

Please change the folder permissions to 777 for admin/photos/uploads  
Please change the folder permissions to 777 for admin/photos/uploads/small\_thumbs  
Please change the folder permissions to 777 for admin/photos/uploads/thumbs  
Please change the file permissions to 777 for admin/backup/db\_functions.php  
Please change the file permissions to 777 for admin/backup/datadump.sql  
Please change the file permissions to 777 for admin/advertisements/delete.php  
Please change the file permissions to 777 for deleteimage.php  
Please change the file permissions to 777 for config.php  
You can change file/folder perms with any ftp software, also know as set attributes

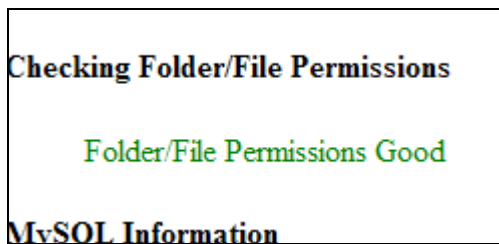

9. Using your FTP software adjust the file permissions by right clicking on the file/folder and selecting 'Set Attributes' or 'Properties' or 'Set File Permissions'.

10. Change the permissions to 777 or Read/Write/Execute for all.

11. Click refresh on web browser to check file permissions.

12. The installation wizard will now ask you for database information. We must now create a new database and database user using CPanel. (*Note: CPanel is hosting control panel software. Your software may be different but similar.*)

#### *Creating a Database*

a). Please login to CPanel and click on MySQL Databases.

b). Scroll down text input and enter new database name into textbox and click Add Db.

A screenshot of a form with a text input field containing the text 'dbname'. To the right of the input field is a button labeled 'Add Db'.

c). Once database is created enter new database username and password and click Add User.

A screenshot of a form with two text input fields. The first is labeled 'UserName:' and contains 'phpsec'. The second is labeled 'Password:' and contains 'dbpass'. Below the password field is a button labeled 'Add User'.

d). Once database user is created. Add user to database by selecting username and database and click Add User to Database.

A screenshot of a form showing a list of database privileges. The 'Privileges:' label is followed by a checked checkbox for 'ALL'. Other checkboxes are for 'ALTER', 'CREATE TEMPORARY TABLES', 'CREATE', 'DELETE', 'DROP', 'SELECT', 'INSERT', 'UPDATE', 'REFERENCES', 'INDEX', and 'LOCK TABLES'. Below the list is a button labeled 'Add User to Db'.

13. We are now ready to enter our database information into the installation wizard and click next. *Please note that CPanel may add a suffix before your database name and/or username. Enter the whole database name and/or password with this suffix into wizard form.*

**MySQL Information**

Please create a new MySQL database and database user.  
Or contact your service provider to set up MySQL as a service.

Enter MySQL database information below.

**Step 2**

**MySQL Information**

Host Location:	localhost
Database Name:	dbname
Database Username:	username
Database Password:	mydbpassword

14. Installation is now complete. You can now access your admin panel here:

[www.yourdomain.com/admin/index.php](http://www.yourdomain.com/admin/index.php)

Username: admin

Password: admin

You can change the username/password under settings in admin. Also don't forget to set your Google Map Key in the administration panel under settings.

**The Real Estate Script -- Installation**

**Step 3**

Setting config file...OK  
Dropping tables if exist...OK  
Installing tables...OK  
Installing contents...OK  
**Installation is now complete!**

## Troubleshooting Questions

### **When I go to [www.yourdomain.com/installfiles/install1.php](http://www.yourdomain.com/installfiles/install1.php) I see a blank page?**

This may be due to a bad upload of the installation files. Using FTP software (i.e. Leech FTP) please login and re-upload install.php, install2.php, install3.php. Please refresh your web browser. If you are still receiving a blank page you might be having a PHP error that is being logged to a file instead of printed to the screen. This also may be due to your domain name DNS is not parked at your ftp server.

### **I received an error after giving the wizard my database information?**

This is most likely due to invalid database information given to the wizard. Or due to a bad upload of the table sql files in the db folder (re-upload db folder). To try to reinstall simply refresh the page.

### **Is support offered?**

To keep the price down only bug support is offered for free. If you have any questions please feel free to send email to [therealestatescript@gmail.com](mailto:therealestatescript@gmail.com).
